

# ENTRANCE PANELS

## 9200 Multi-button

- Video compatible
- Flush metal capped button
- Tamper resistant fixings
- Available in brushed stainless, mirror, polished stainless and polished brass

The Entryphone® 9200 multi-button entrance panels are available, from stock, in sizes from a two button unit up to a thirty button unit and in larger sizes to special order. All units incorporate weather-resistant speech components, flush metal buttons, rear-illuminated name inserts and tamper-resistant hex-key fixings. Available as standard in brushed stainless steel and mirror polish stainless steel or, to special order, in un-lacquered polished brass.

## CCD Video

All 9200 panels may be ordered fitted with colour CCD video camera. The camera module, incorporating miniature high resolution solid state CCD camera, is designed to be fitted behind the speech module and the logo insert is changed to a lens.

## Surface or Flush

All multi-button panels are supplied complete with 22swg galvanised steel back box for flush fitting. These allow the plate to overlap by 19mm all round to cover inaccuracies when cutting into the wall. Where it is impractical to flush in a door panel, surface frames are available. There are two types, either stainless steel hood-style frames or solid oak frames.
