

DK-201V DESK INSTRUMENT

The DK-200V is a kit of parts to allow the 201V telephone to be used as a desk instrument.

It comprises a stainless steel mounting plate fitted with rubber feet, a flexible 3 metre CAT5 cable and an RJ45 surface mounting socket. The desk-kit is supplied pre-wired to the 201V instrument.

The installer should fit the RJ45 socket to a fixed position well within 3 metres of the intended phone position and connect the fixed wiring to the IDC terminals (using the disposable tool provided) as follows:

Terminal	Code	Flex colour
1	Vid	WHT/ORG
2	20+	ORG/WHT
3	L	WHT/GRN
4	P	BLU/WHT
5	1	WHT/BLU
6	B,F,G/20-/SCRN	GRN/WHT
7	A	WHT/BRN
8	Sig	BRN/WHT

Please note: Because of the limited number of conductors in the flexible lead, terminal 6 is a combined common. These wires are separate in the main wiring but should be combined in the desk kit socket.

For additional details and settings for the 201V please refer to the main instruction sheet.
