

## Entryphone TeleDial GSM Door Intercom Resident's user instructions.

The Entryphone TeleDial GSM Door Intercom fitted to your building offers a wireless door entry solution using mobile phone technology. With the TeleDial GSM there are no phone instruments fitted in the apartments but instead, calls from the door are routed through the mobile phone network to ring you directly on your standard network telephone; either land-line or mobile.

### 55 to admit your visitor

You will receive calls from the door like any other call. On answering you speak to the caller as you would on any normal phone call. If you wish to allow your visitor to gain entry to the building dialling 55 on your telephone which will send an instruction to the TeleDial GSM to operate the door release.

### 1<sup>st</sup> Number

e.g. 020 7946 0294

### 2<sup>nd</sup> Number

e.g. 07700 900164

### Two Numbers

Each apartment can have either one or two phone numbers programmed into the unit's memory. The TeleDial will ring the first number for 20 seconds, if there is no answer it will call the second number (if there is one). Calls from the door are limited to about 60 seconds which is ample time to greet a visitor and let them in if you choose to. The unit is not intended for long conversations.

### Caller ID

If you have caller-ID set up on your phone (mobiles have this as a default feature but with land-lines this needs to be requested), we recommend you add an entry in your telephone's phone-book indicating it is a call from the door.

### **Answering machines/Voice mail**

Please note that if you wish to avoid a call from the door being answered by your answering machine or voice mail please ensure these facilities are set to answer after at a longer period than 20 seconds. For mobile phones you may have to contact your service provider to make these changes.

### **Changing your allocated number**

If you need to change the telephone number(s) assigned to your flat number please contact your property management company or, if you need our assistance, please contact us on the number below.

### **EXTENDED FEATURES (If enabled)**

#### **Code Entry**

The **TeleDial GSM** has a code feature so access to the building can be obtained by keying in a correct 4 digit PIN. Please contact your system administrator or property managing agent for this to be set.

*To gain access using an authorised code dial "CODE" followed by the four digit access code.*

#### **Dial-in to Release**

The **TeleDial GSM** has a dial-in feature so access to the building can be obtained by calling the unit from a phone. If the unit has been programmed with the caller-ID of the calling phone the door will release. As the unit does not answer the call but instead hangs-up as soon as it has detected the call-ID the call will be free-of-charge on most networks.
