

Contacting the Porter

Your QVT1 monitor includes a Guard Mode, allowing direct two-way communication between residents and the building porter. To call the porter, simply press the  (Lock 2) button. The monitor will automatically switch on and place the call. Once the porter has answered, you can speak hands-free in the same way as a normal door call.

To end the call, press the  (on/off button) and the monitor will return to its idle state.

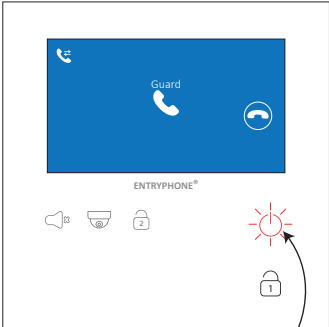

Receiving a Call from the Porter

The porter can also call your QVT1 monitor directly from their monitor. When the porter calls your QVT1 monitor, it will ring and the screen will turn on automatically. To answer the call and activate the speech, press the  (on/off button). You can then speak with the porter in the same way as when receiving a call from the main entrance.

When the conversation is complete, press the  (on/off button) to end the call and return the monitor to its idle state.

End call
